

Minimum Storage Life at Customer Premises

Motor Oil	3 Years
Automatic Transmission Fluid	3 Years
Hydraulic Fluid (in tin can)	5 Years
Hydraulic Fluid (in plastic container)	3 Years
Antifreeze	5 Years
Brake Fluid (in tin can)	5 Years
Brake Fluid (in plastic container)	3 Years

Pre-condition for a minimum storage life is the correct storage in unopened, original containers, i.e. protection from direct sunlight, frost, and rain and a storage temperature between 41°F and up to 104°F.

Extensive practical experience has shown that with the correct storage the quality of our products does not typically deteriorate even if the above mentioned storage periods are slightly extended.

No guarantee of compliance with the technical data and characteristics specified in Product Information Sheet and specification can be given after the containers have been opened.

The indication of a minimum storage life does not constitute any guarantee of durability.

We recommend to thoroughly homogenize oily products before use (e.g. shake well or stir up with suitable equipment).
